

Ungarala Naga Venkata Raviteja

FULL STACK AI DEVELOPER · LLMS · RAG PIPELINES · AI AGENTS & WORKFLOW AUTOMATION

Full Stack AI Developer with hands-on experience building production-grade web applications powered by modern AI. I work across the full stack — React on the frontend, FastAPI and Node.js on the backend — and specialize in integrating LLMs, RAG pipelines, and autonomous AI agents directly into product workflows. I have shipped features where AI agents handle multi-step business tasks end-to-end, and built retrieval systems that ground LLM responses in real company data. Beyond AI, I deploy on AWS, manage data in MongoDB and Snowflake, and ship through GitHub CI/CD.

WORK EXPERIENCE

NEUZENAI IT Solutions Pvt Ltd Dec 2025 – Present
Full Stack AI Developer · Full-time
Hyderabad, Telangana

- Build complete web applications from scratch — React on the frontend, FastAPI or Node.js on the backend — owning the feature end-to-end until production.
- Develop and integrate RAG (Retrieval-Augmented Generation) pipelines that allow LLMs to answer questions grounded in company-specific documents and knowledge bases.
- Build LLM-powered features including document auto-generation, intelligent form filling, and context-aware chat interfaces connected directly into product workflows.
- Design and ship autonomous AI agents integrated with business workflows — agents that read triggers, make decisions, call external APIs, and complete multi-step tasks without manual intervention.
- Train ML models and expose them as REST APIs for real-time frontend consumption.
- Use AWS Lambda for serverless background jobs and lightweight API tasks; deploy on AWS Amplify with GitHub CI/CD automated pipelines.
- Store and query data in MongoDB; connect to Snowflake pipelines for analytics and reporting on large datasets.

Robocoupler Pvt Ltd Nov 2024 – Mar 2025
Full Stack Developer Intern (AI Integrated) · Internship
Visakhapatnam, Andhra Pradesh

- Built REST APIs using Node.js and FastAPI for data retrieval and action triggering across application modules.
- Built a RAG system enabling users to query an LLM against their own documents rather than relying solely on pre-trained knowledge.
- Created an OCR pipeline that reads text from scanned documents and converts it into structured data for downstream processing.
- Used OpenCV for image preprocessing — object and region detection — before passing images to AI models.
- Collaborated with frontend developers to integrate backend AI features smoothly into the user interface.

KEY PROJECTS

HRMS Platform — Employee Management System
FastAPI · LLM · React · MongoDB · AWS · Face Authentication

- Built a full employee lifecycle system — onboarding, attendance, and payroll — using independent FastAPI microservices.
- Integrated an LLM to auto-generate HR documents (offer letters, payslips) by filling templates from employee data.
- Added face recognition for clock-in/out, replacing cards and PINs with secure biometric attendance tracking.
- Deployed all APIs on AWS with MongoDB for scalable data storage.

Pipelyt — AI Brand Content Platform
React · Tailwind CSS · Framer Motion · Autonomous AI Agents

- Built a platform where autonomous AI agents create and publish brand content — system infers brand style from a URL and generates content automatically.
- Redesigned the dashboard with a multi-column layout, reducing scroll depth by ~60%.
- Built a "Business DNA" feature that scans a brand website and extracts logo, tone, and color data for automatic reuse in content.

Spenzo — Marketing Budget Optimization Platform
React · FastAPI · AWS Lambda · S3 · Google Gemini Pro · Recharts · Plotly

- Built an analytics platform using Bayesian models to optimize marketing budget allocation across channels.
- Integrated Google Gemini Pro for natural language querying — users ask "which channel gave the best ROI?" and get instant AI answers.
- Deployed serverless functions on AWS Lambda with S3 storage; built interactive dashboards with Plotly and Recharts.

TECHNICAL SKILLS

AI / GENAI
LLMs, RAG, Generative AI, LangChain, LangGraph, AI Agents, Prompt Engineering

FRONTEND
React, Angular, Tailwind CSS, Framer Motion

BACKEND
FastAPI, Node.js, Express.js, REST APIs

CLOUD & DEVOPS
AWS Lambda, AWS S3, AWS Amplify, Google Cloud, GitHub CI/CD

DATABASES
MongoDB, MongoDB Atlas, MySQL, Snowflake

LANGUAGES & TOOLS
Python, JavaScript, GitHub, Postman, OpenCV

EDUCATION

B.Tech — AI & Machine Learning
Swarnandhra College of Engineering & Technology
2021 – 2025 CGPA 8.49

Intermediate — MPC
Sri Chaitanya Junior College
2019 – 2021 93.5%

Secondary School
Sujatha E.M High School
2018 – 2019 GPA 9.5

ACHIEVEMENTS

- Global rank **1,700** in IEEE Xtreme 18.0 — **1st in college**.
- Top 40 Finalist** in international Cybersecurity CTF by PALS & Edith Cowan University.
- 2nd Place** in JPMorgan Chase project presentation competition.

CERTIFICATIONS

NPTEL — Python for Data Science

AI for India 2.0 Certification

Microsoft Power BI Certification

Python for Data Science — Brain-O-Vision Hackathon
